EDUCATION

Bachelor of Arts, Computer Science, Boston University

May 2026

EXPERIENCE

Lawyer.com, Basking Ridge, NJ

May 2025 - Present

AI Product Engineer

- Built and scaled a multi-tenant CRM automation platform across 5 law firms, processing 5,000+ clients to date at a current production rate of ~2,000 clients per month.
- Developed an NL2SQL agent used by the engineering team, translating natural-language requests into executable SQL with nearly 90% accuracy across internal testing.
- Engineered fault-tolerant CRM session infrastructure with automated health checks, failover, and recovery, maintaining 99.5% availability.
- Built a workflow and automation engine now powering 500+ production workflows, with trigger/action contracts, revision control, deduplication, deterministic execution queues, and safe activation.
- Engineered a custom Lawmatics integration after the official API proved insufficient, analyzing undocumented GraphQL interfaces to support scheduling, CRM mutations, authentication, and production automation.

BlackVertex, Boston, MA

Jan 2026 - Present

Founder

- Founded and grew BlackVertex into a \$10K+ revenue brand and software studio, delivering strategy, identity, web, and product engineering from discovery through production launch.
- Designed Creator Atlas' digital presence, helping increase lead-to-call conversion from 18% to 35% and double passive warm leads from 4 to 8 per month.
- Developed BlackVertex's internal AI platform for automated market and competitor research, personalized Gmail outreach, and persistent knowledge storage supporting business development.
- Built and launched digital products and brand systems across client and founder-owned ventures including Creator Atlas, Syncora, and Thornborn, owning design, frontend, backend, and deployment.

SKILLS

Languages: Python, TypeScript, JavaScript, C#, SQL, Java, PHP

AI & Data: LLM Agents, RAG, Vector Search, NLP, Prompt/Context Engineering, PostgreSQL, Supabase, Firestore

Frameworks & Backend: FastAPI, ASP.NET Core, Node.js, Next.js, NestJS, React, GraphQL, Playwright

Cloud & DevOps: GCP (Cloud Run), Docker, Vercel, DigitalOcean, GitHub Actions, Git

PROJECTS

Syncora - AI Memory Layer for Coding Workflows

NestJS, Next.js, TypeScript, React, PostgreSQL, Drizzle ORM

- Created Syncora, a local-first context control plane giving Codex, Cursor, and Claude Code durable project memory across sessions by preserving decisions, constraints, implementation history, and architectural rationale.
- Configured fresh AI sessions to reconstruct months of project history across 20 active workstreams, retrieving task-relevant context and code-linked decisions without relying on chat history or rereading the repository.

CourseBranch — AI-Powered Academic Planning Platform

ASP.NET Core, Supabase, PostgreSQL, Ollama, Vercel, DO, Git

- Designed a full-stack academic planning platform for BU students combining multi-year course planning, transcript imports, prerequisite graphs, degree tracking, and conflict-free timetable generation.
- Engineered an AI-assisted requirements pipeline, converting unstructured university bulletins into provenance-bound degree rules, publishing validated artifacts for 106 majors with 0 blockers.
